## PROFESSIONAL SUMMARY

Detail-oriented Backend Developer and BEIT graduate with hands-on professional experience building full-stack web applications, REST APIs, and database-driven systems at Kaha Inc. Skilled in Node.js, JavaScript, Python, PHP, MySQL, and MongoDB. Strong foundation in computer networking, Linux administration, and machine learning fundamentals. Deeply passionate about system design, software architecture, and writing clean, maintainable code. Eager to grow into scalable architecture design and contribute to high-impact engineering teams.

## WORK EXPERIENCE

### Backend Developer Trainee | Kaha Inc. (@kahainc) | Anamnagar, Kathmandu

2025 – Present

- Design and develop backend services and RESTful APIs using Node.js and Express.js for production systems.
- Completed and delivered a full-stack restaurant e-commerce and online order management system, covering product catalogues, cart and checkout flows, order tracking, and an admin dashboard.
- Integrated MySQL (relational data) and MongoDB (session/log data) as dual database layers within the same application.
- Collaborate cross-functionally with the frontend team to connect React-based UI components to backend APIs, ensuring end-to-end functionality.
- Participate in code reviews, sprint planning, and production deployment cycles in an agile environment.

## EDUCATION

### Bachelor of Engineering in Information Technology (BEIT)

Everest Engineering College, Pokhara University | Sanepa, Lalitpur | 2021 Batch

**Relevant coursework:** Data Structures & Algorithms, Database Management Systems, Computer Networks, Operating Systems, Software Engineering, Web Technologies, Network Security.

## PROJECTS

### Restaurant E-Commerce & Order Management System | [github.com/arjuthp](https://github.com/arjuthp)

Tech Stack: Node.js, Express.js, JavaScript, MySQL, MongoDB, HTML5, CSS3, Bootstrap

- Built a production-deployed full-stack platform for online food ordering — customers can browse menus, place and track orders, and manage payments.
- Implemented JWT-based authentication with role-based access control (admin vs customer); secured all protected routes with middleware.
- Designed a normalised MySQL schema for orders, inventory, and users; used MongoDB for session storage and activity logs.
- Developed a responsive Bootstrap frontend fully integrated with Node.js backend APIs.

### Human Face Detection System | [github.com/arjuthp/Human\\_Face\\_Detection](https://github.com/arjuthp/Human_Face_Detection)

Tech Stack: Python, OpenCV, scikit-learn (SVM), scikit-image (HOG), NumPy, Pickle

- Built a real-time face detection and classification pipeline using HOG for feature extraction and SVM classifier for face/non-face classification.
- Developed three modular scripts for dataset labelling, HOG feature extraction, and live webcam inference.
- Integrated OpenCV Haar Cascades for fast face localisation; rendered detected faces with annotated bounding boxes in real time.

### BloodView – Blood Bank Inventory Management System | [github.com/arjuthp/projectBLOODVIEW-main--2-](https://github.com/arjuthp/projectBLOODVIEW-main--2-)

Tech Stack: PHP, MySQL, HTML5, CSS3

- Developed a web-based blood bank management system enabling operators to record donations, process withdrawals, and manage secure user authentication.
- Built a PHP/MySQL backend with parameterised queries and session-based access control to prevent unauthorised access.

### LAN Chat Application | [github.com/arjuthp/lan-chat-app](https://github.com/arjuthp/lan-chat-app)

*Tech Stack: Python, Sockets, Threading (client-server architecture)*

- Built a multi-user LAN chat system supporting concurrent connections, real-time message delivery, file sharing, and persistent chat history logging.
- Used Python's socket and threading libraries; implemented user login, direct and group messaging, and binary chunked file transfer.

### Linux Bash Backup Utility

*Tech Stack: Bash, Linux, cron*

- Automated file backup script with configurable paths, timestamped tar.gz archives, comprehensive error handling, and detailed logging.
- Scheduled execution via cron jobs with failure notification hooks for operational reliability.

## TECHNICAL SKILLS

---

**Languages:** Python, JavaScript, PHP, HTML5, CSS3, Bash, C, C++

**Frameworks & Libraries:** Node.js, Express.js, Bootstrap, OpenCV, scikit-learn, scikit-image, NumPy

**Databases:** MySQL, MongoDB, Mongoose

**Tools & Platforms:** Git, GitHub, Postman, VS Code, Nmap, Wireshark, VirtualBox/VMware

**Operating Systems:** Linux (Ubuntu / Kali), Windows; Bash scripting

**Core Concepts:** REST API design, JWT authentication, RBAC, database schema design, system design fundamentals, HOG feature extraction, SVM classification, socket programming, networking, version control (Git)

**Soft Skills:** Problem-solving, attention to detail, fast learner, collaborative, security-focused mindset

## CURRENTLY LEARNING

---

- NestJS and advanced backend architecture patterns
- System design and scalable software architecture
- Cloud deployment tools and DevOps practices
- Agentic development and AI-integrated systems
- Linux server administration and networking

## LANGUAGES

---

English: Professional proficiency | Nepali: Native
